Annex B (informative): Change history64

Foreword

This Technical Specification has been produced by the 3rd Generation Partnership Project (3GPP).

The contents of the present document are subject to continuing work within the TSG and may change following formal TSG approval. Should the TSG modify the contents of the present document, it will be re-released by the TSG with an identifying change of release date and an increase in version number as follows:

Version x.y.z

where:

x the first digit:

- 1 presented to TSG for information;
- 2 presented to TSG for approval;
- 3 or greater indicates TSG approved document under change control.

y the second digit is incremented for all changes of substance, i.e. technical enhancements, corrections, updates, etc.

z the third digit is incremented when editorial only changes have been incorporated in the document.

Introduction

This clause is optional. If it exists, it is always the second unnumbered clause.

1 Scope

The present document specifies the stage 3 protocol and data model for the Nnrf Service Based Interface. It provides stage 3 protocol definitions and message flows, and specifies the API for each service offered by the NRF.

The 5G System stage 2 architecture and procedures are specified in 3GPP TS 23.501 [2] and 3GPP TS 23.502 [3].

The Technical Realization of the Service Based Architecture and the Principles and Guidelines for Services Definition are specified in 3GPP TS 29.500 [4] and 3GPP TS 29.501 [5].

2 References

The following documents contain provisions which, through reference in this text, constitute provisions of the present document.

- References are either specific (identified by date of publication, edition number, version number, etc.) or non-specific.
- For a specific reference, subsequent revisions do not apply.
- For a non-specific reference, the latest version applies. In the case of a reference to a 3GPP document (including a GSM document), a non-specific reference implicitly refers to the latest version of that document *in the same Release as the present document*.

3 Definitions and abbreviations

3.1 Definitions

For the purposes of the present document, the terms and definitions given in 3GPP TR 21.905 [1] and the following apply. A term defined in the present document takes precedence over the definition of the same term, if any, in 3GPP TR 21.905 [1].

3.2 Abbreviations

For the purposes of the present document, the abbreviations given in 3GPP TR 21.905 [1] and the following apply. An abbreviation defined in the present document takes precedence over the definition of the same abbreviation, if any, in 3GPP TR 21.905 [1].

5GC	5G Core Network
NF	Network Function
NRF	NF Repository Function

4 Overview

The Network Function (NF) Repository Function (NRF) is the network entity in the 5G Core Network (5GC) supporting the following functionality:

- Maintains the NF profile of available NF instances and their supported services;
- Allows other NF instances to subscribe to, and get notified about, the registration in NRF of new NF instances of a given type;
- Supports service discovery function. It receives NF Discovery Requests from NF instances, and provides the information of the available NF instances fulfilling certain criteria (e.g., supporting a given service).

Figure 4-1 shows the reference architecture for the 5GC, with focus on the NRF:

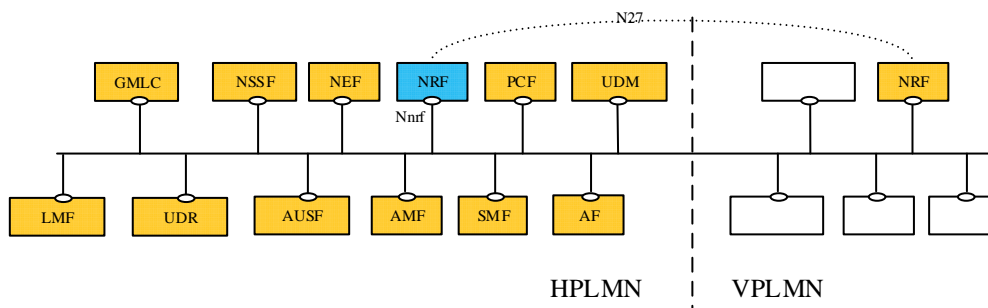

Figure 4-1: 5G System architecture

For the sake of clarity, the NRF is never depicted in reference point representation figures, given that the NRF interacts with every other NF in the 5GC. As an exception, in the roaming case, the reference point between the vNRF and the hNRF is named as N27. The reference point name of N27 is used only for representation purposes, but its functionality is included in the services offered by the Nnrf Service-Based Interface.

5 Services Offered by the NRF

5.1 Introduction

The NRF offers to other NFs the following services:

- Nnrf_NFManagement
- Nnrf_NFDiscovery
- OAuth2 Authorization

5.2 Nnrf_NFManagement Service

5.2.1 Service Description

The Nnrf_NFManagement service allows a Network Function Instance in the serving PLMN to register, update or deregister its profile in the local NRF.

It also allows an NF to subscribe to be notified of newly registered NF Instances along with their NF services.

The NF profile consists of general parameters of the NF Instance, and also the parameters of the different services exposed by the NF Instance.

5.2.2 Service Operations

5.2.2.1 Introduction

The services operations defined for the Nnrf_NFManagement service are as follows:

- NFRegister: It allows an NF Instance to register its NF profile in the NRF; it includes the registration of the general parameters of the NF Instance, together with the list of services exposed by the NF Instance. This service operation is not allowed to be invoked from an NRF in a different PLMN.
- NFUpdate: It allows an NF Instance to replace, or update partially, the parameters of its NF profile (including the parameters of the associated services) in the NRF; it also allows to add or delete individual services offered by the NF Instance. This service operation is not allowed to be invoked from an NRF in a different PLMN.
- NFDeregister: It allows an NF Instance to deregister its NF profile in the NRF, including the services offered by the NF Instance. This service operation is not allowed to be invoked from an NRF in a different PLMN.
- NFStatusSubscribe: It allows an NF Instance to subscribe to changes on the status of NF Instances registered in NRF. This service operation can be invoked by an NF Instance in a different PLMN (via the local NRF in that PLMN).
- NFStatusNotify: It allows the NRF to notify subscribed NF Instances of changes on the status of NF Instances. This service operation can be invoked by an NF Instance in a different PLMN (via the local NRF in that PLMN).
- NFStatusUnsubscribe: It allows an NF Instance to unsubscribe to changes on the status of NF Instances registered in NRF. This service operation can be invoked by an NF Instance in a different PLMN (via the local NRF in that PLMN).

NOTE: The "change of status" of the NFStatus service operations can imply a request to be notified of newly registered NF Instances in NRF, or to be notified of profile changes of a specific NF Instance, or to be notified of the deregistration of an NF Instance.

5.2.2.2 NFRegister

5.2.2.2.1 General

This service operation registers an NF in the NRF by providing the NF profile of the requesting NF to the NRF, and the NRF marks the requesting NF as available to be discovered by other NFs. It is also used to register services associated to an existing NF Instance.

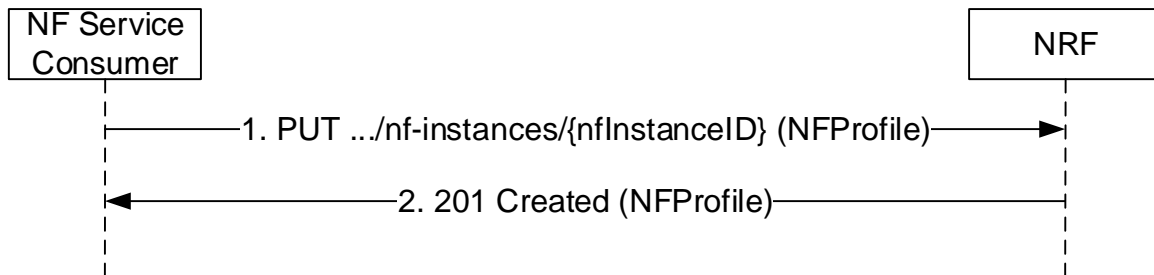

Figure 5.2.2.2.1-1: NF Instance Registration

1. The NF Service Consumer shall send a PUT request to the resource URI representing the NF Instance. The URI is determined by the NF Instance. The variable {nfInstanceId} represents an identifier, provided by the NF Service Consumer, that shall be globally unique inside the PLMN of the NRF where the NF is being registered. The format of the NF Instance ID shall be a Universally Unique Identifier (UUID) version 4, as described in IETF RFC 4122 [18].

EXAMPLE: UUID version 4: "4947a69a-f61b-4bc1-b9da-47c9c5d14b64"

The payload body of the PUT request shall contain a representation of the NF Instance to be created.

2. On success, "201 Created" shall be returned, the payload body of the PUT response shall contain the representation of the created resource and the "Location" header shall contain the URI of the created resource. Additionally, the NRF returns a "heart-beat timer" containing the number of seconds expected between two consecutive heart-beat messages from an NF Instance to the NRF (see subclause 5.2.2.3.2).

If the registration of the NF instance fails at the NRF due to errors in the encoding of the NFProfile JSON object, the NRF shall return "400 Bad Request" status code with the ProblemDetails IE providing details of the error.

If the registration of the NF instance fails at the NRF due to NRF internal errors, the NRF shall return "500 Internal Server Error" status code with the ProblemDetails IE providing details of the error.

5.2.2.3 NFUpdate

5.2.2.3.1 General

This service operation updates the profile of a Network Function previously registered in the NRF by providing the updated NF profile of the requesting NF to the NRF. The update operation may apply to the whole profile of the NF (complete replacement of the existing profile by a new profile), or it may apply only to a subset of the parameters of the profile (including adding/deleting/replacing services to the NF profile).

To perform a complete replacement of the NF Profile of a given NF Instance, the NF Service Consumer shall issue an HTTP PUT request, as shown in Figure 5.2.2.3.1-1:

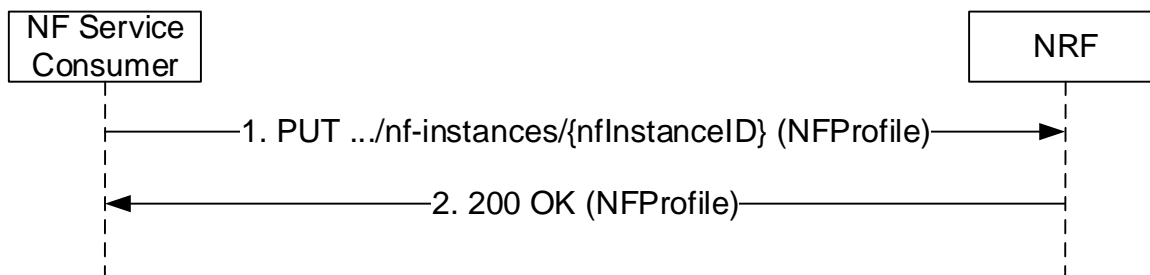

Figure 5.2.2.3.1-1: NF Profile Complete Replacement

1. The NF Service Consumer shall send a PUT request to the resource URI representing the NF Instance. The payload body of the PUT request shall contain a representation of the NF Instance to be completely replaced in the NRF.
2. On success, "200 OK" shall be returned, the payload body of the PUT response shall contain the representation of the replaced resource.

If the update of the NF instance fails at the NRF due to errors in the encoding of the NFProfile JSON object, the NRF shall return "400 Bad Request" status code with the ProblemDetails IE providing details of the error.

If the update of the NF instance fails at the NRF due to NRF internal errors, the NRF shall return "500 Internal Server Error" status code with the ProblemDetails IE providing details of the error.

To perform a partial update of the NF Profile of a given NF Instance, the NF Service Consumer shall issue an HTTP PATCH request, as shown in Figure 5.2.2.3.1-2. This partial update shall be used to add/delete/replace individual parameters of the NF Instance, and also to add/delete/replace any of the services (and their parameters) offered by the NF Instance.

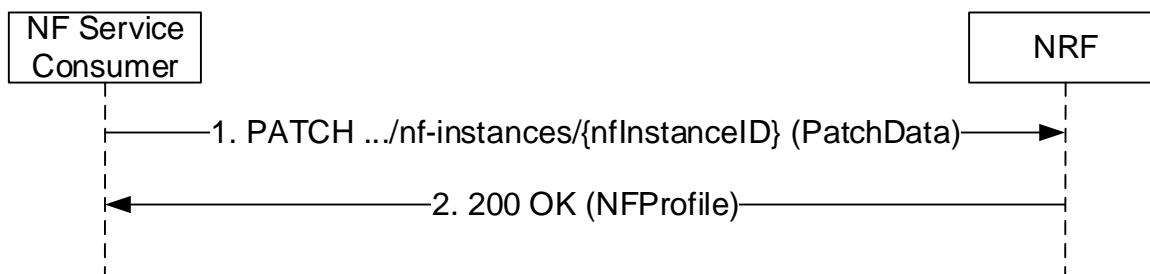

Figure 5.2.2.3.1-2: NF Profile Partial Update

1. The NF Service Consumer shall send a PATCH request to the resource URI representing the NF Instance. The payload body of the PATCH request shall contain the list of operations (add/delete/replace) to be applied to the NF Profile of the NF Instance; these operations may be directed to individual parameters of the NF Profile or to the list of services (and their parameters) offered by the NF Instances. In order to leave the NF Profile in a consistent state, all the operations specified by the PATCH request body shall be executed atomically.
2. On success, "200 OK" shall be returned, the payload body of the PATCH response shall contain the representation of the replaced resource.

Editor's Note: the description of failure cases is FFS.

5.2.2.3.2 NF Heart-Beat

Each NF that has previously registered in NRF shall contact the NRF periodically (heart-beat), by invoking the NFUpdate service operation, in order to show that the NF is still operative.

The time interval at which the NRF shall be contacted is deployment-specific, and it is returned by the NRF to the NF Service Consumer as a result of a successful registration.

When the NRF detects that a given NF has not updated its profile for a configurable amount of time (longer than the heart-beat interval), the NRF considers the NF as deregistered and its services can no longer be discovered by other NFs via the NFDISCOVERY service.

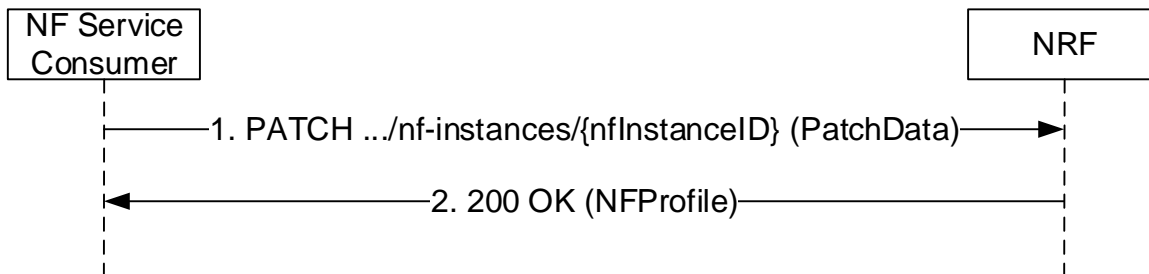

Figure 5.2.2.3.2-1: NF Heart-Beat

1. The NF Service Consumer shall send a PATCH request to the resource URI representing the NF Instance. The payload body of the PATCH request shall contain a "replace" operation on the "nfStatus" attribute of the NF Profile of the NF Instance, and set it to the value "REGISTERED".

In addition, the NF Service Consumer may also provide the load information of the NF, and/or the load information of the NF associated NF services.

2. On success, "200 OK" shall be returned, the payload body of the PATCH response shall contain the representation of the replaced resource.

Editor's Note: It is FFS to determine if a more efficient solution than HTTP/PATCH request can be defined for the heart-beat mechanism.

5.2.2.4 NFDeregister

5.2.2.4.1 General

This service operation removes the profile of a Network Function previously registered in the NRF.

It is executed by deleting a given resource identified by a "NF Instance ID". The operation is invoked by issuing a DELETE request on the URI representing the specific NF Instance.

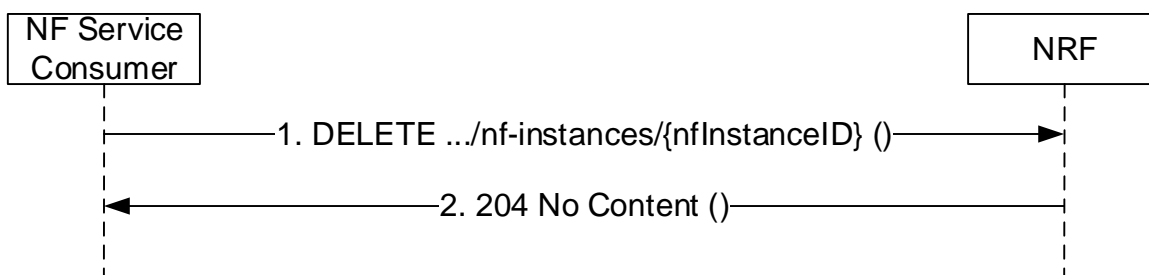

Figure 5.2.2.4.1-1: NF Instance Deregistration

1. The NF Service Consumer shall send a DELETE request to the resource URI representing the NF Instance. The request body shall be empty.
2. On success, "204 No Content" shall be returned. The response body shall be empty.

Editor's Note: the description of failure cases is FFS.

5.2.2.5 NFStatusSubscribe

5.2.2.5.1 General

This service operation is used to:

- creates a subscription so an NF Service Consumer can request to be notified when NF Instances of a given set, following certain filter criteria are registered/deregistered in NRF or when their profile is modified;
- create a subscription to a specific NF Instance so an NF Service Consumer can request to be notified when the profile of such NF Instance is modified or when the NF Instance is deregistered from NRF.

5.2.2.5.2 Subscription to NF Instances

The subscription to notifications on NF Instances is executed creating a new individual resource under the collection resource "subscriptions". The operation is invoked by issuing a POST request on the URI representing the "subscriptions" resource.

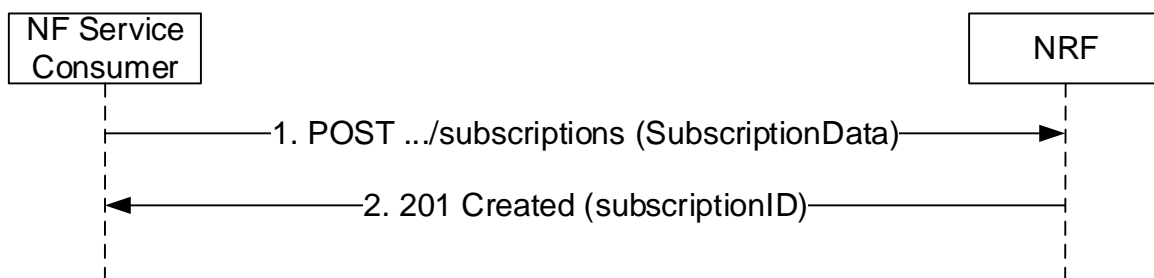

Figure 5.2.2.5.2-1: Subscription to newly registered NF Instances

1. The NF Service Consumer shall send a POST request to the resource URI representing the "subscriptions" collection resource. The request body shall include the data indicating the type of notifications that the NF Service Consumer is interested in receiving; it also contains a callback URI, where the NF Service Consumer shall be prepared to receive the actual notification from the NRF (see NFStatusNotify operation in 5.2.2.6).
2. On success, "201 Created" shall be returned.

Editor's Note: the description of failure cases is FFS.

5.2.2.6 NFStatusNotify

5.2.2.6.1 General

This service operation notifies each NF Service Consumer that was previously subscribed to receiving notifications of registration/deregistration of NF Instances, or notifications of changes of the NF profile of a given NF Instance. The notification is sent to a callback URI that each NF Service Consumer provided during the subscription (see NFStatusSubscribe operation in 5.2.2.5).

5.2.2.6.2 Notification from NRF

The operation is invoked by issuing a POST request to each callback URI of the different subscribed NF Instance.

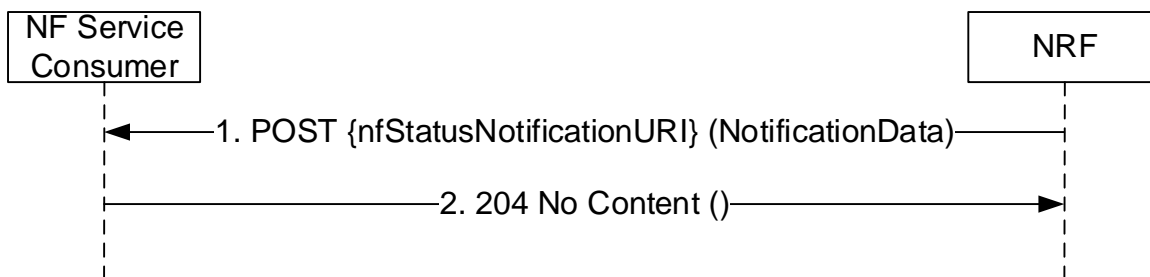

Figure 5.2.2.6.2-1: NRF Notifications

1. The NRF shall send a POST request to the callback URI.

For notifications of newly registered NF Instances, the request body shall include the data associated to the newly registered NF, and its services, according to the criteria indicated by the NF Service Consumer during the subscription operation. These data shall contain, among others, the NFInstanceID of the NF Instance, an indication of the event being notified ("registration"), and the services offered by the NF Instance.

For notifications of changes of the profile of a NF Instance, the request body shall include the NFInstanceID of the NF Instance whose profile was changed, an indication of the event being notified ("profile change"), and the new profile data.

For notifications of deregistration of the NF Instance from NRF, the request body shall include the NFInstanceID of the deregistered NF Instance, and an indication of the event being notified ("deregistration").

2. On success, "204 No content" shall be returned by the NF Service Consumer.

Editor's Note: the description of failure cases is FFS.

5.2.2.7 NFStatusUnSubscribe

5.2.2.7.1 General

This service operation removes an existing subscription to notifications.

5.2.2.7.2 Subscription removal

It is executed by deleting a given resource identified either by a "subscriptionID". The operation is invoked by issuing a DELETE request on the URI representing the specific subscription.

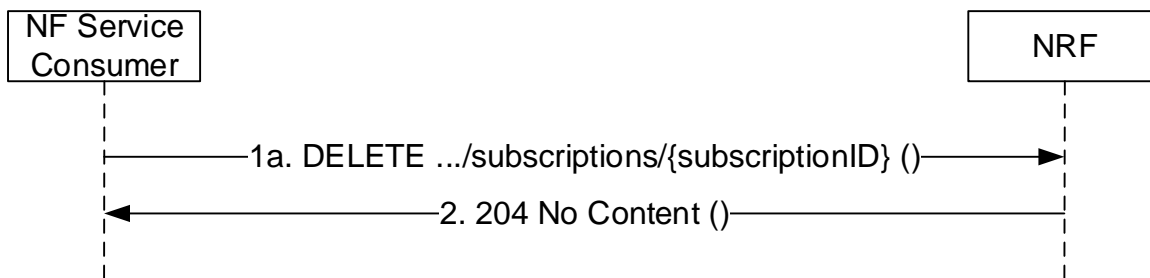

Figure 5.2.2.7.1-1: Unsubscription to Notifications

1. The NF Service Consumer shall send a DELETE request to the resource URI representing the individual subscription. The request body shall be empty.
2. On success, "204 No Content" shall be returned. The response body shall be empty.

Editor's Note: the description of failure cases is FFS.

5.3 Nnrf_NFDiscovery Service

5.3.1 Service Description

The Nnrf_NFDiscovery service allows a Network Function Instance to discover services offered by other Network Function Instances, by querying the local NRF.

It also allows an NRF in a PLMN to re-issue a discovery request towards an NRF in another PLMN (e.g., the HPLMN of a certain UE).

5.3.2 Service Operations

5.3.2.1 Introduction

The service operations defined for the Nnrf_NFDiscovery service are as follows:

- NFDDiscover: It provides to the NF service consumer the IP address(es) or FQDN of the NF Instance(s) or NF Service(s) matching certain input criteria.

5.3.2.2 NFDDiscover

5.3.2.2.1 General

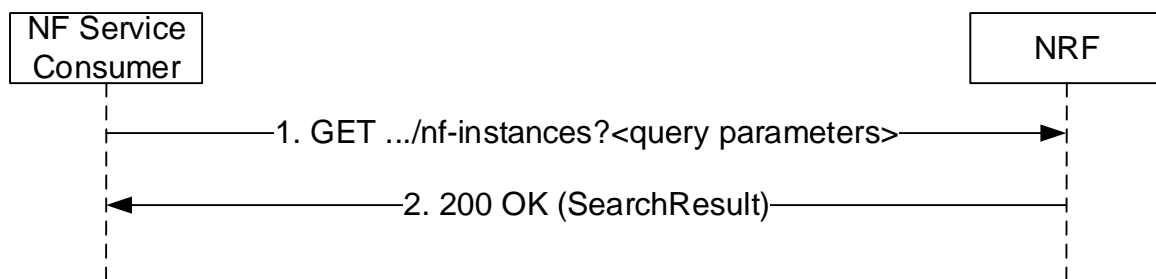

Figure 5.3.2.2.1-1: NF Discovery Request

1. The NF Service Consumer shall send an HTTP GET request to the resource URI "nf-instances" collection resource. The input filter criteria for the discovery request shall be included in query parameters.
2. On success, "200 OK" shall be returned. The response body shall contain a validity period, during which the search result can be cached by the NF Service Consumer, and an array of NF profile objects, that satisfy the search filter criteria (e.g., all NF Instances offering a certain NF Service name). If the NF Service Consumer is not allowed to discover the NF services for the requested NF type provided in the query parameters, the NRF shall return "403 Forbidden" response.

5.4 OAuth2 Authorization Service

5.4.1 Service Description

The NRF offers an OAuth2 authorization service (see IETF RFC 6749 [16]), following the "Client Credentials" authorization grant, as specified in 3GPP TS 33.501 [15]. It exposes a "Token Endpoint" where the Access Token Request service can be requested by NF Service Consumers.

5.4.2 Service Operations

5.4.2.1 Introduction

The services operations defined for the OAuth2 Authorization service are as follows:

- Access Token Request

5.4.2.2 Access Token Request

5.4.2.2.1 General

This service operation is used by an NF Service Consumer to request an OAuth2 access token from the authorization server (NRF).

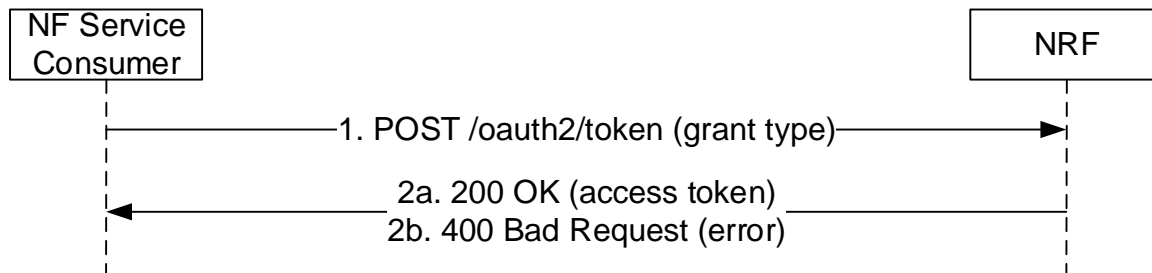

Figure 5.4.2.2.1-1: Access Token Request

1. The NF Service Consumer shall send a POST request to the "Token Endpoint", as described in IETF RFC 6749 [16], clause 3.2. The "Token Endpoint" URI shall be:

{nrfApiRoot}/oauth2/token

where {nrfApiRoot} represents the concatenation of the "scheme" and "authority" components of the NRF, as defined in IETF RFC 3986 [17].

The body of the HTTP POST request shall indicate that the required OAuth2 grant must be of type "Client Credentials".

The NF Service Consumer shall use HTTP Basic authentication towards this endpoint, using the "nfInstanceId" of the NF Service Consumer as "username", and using the registered credential between NF Service Consumer and NRF, as "password".

2. On success, "200 OK" shall be returned, the payload body of the POST response shall contain, among other parameters, the requested access token, the token type and the expiration time for the token.

If the access token request fails at the NRF, the NRF shall return "400 Bad Request" status code, including a JSON object in the response payload, that includes details about the specific error that occurred.

6 API Definitions

6.1 Nnrf_NFManagement Service API

6.1.1 API URI

URIs of this API shall have the following root:

{apiRoot}/{apiName}/{apiVersion}/

where the "apiName" shall be set to "nnrf-nfm" and the "apiVersion" shall be set to "v1" for the current version of this specification.

6.1.2 Usage of HTTP

6.1.2.1 General

This subclause will include a reference to TS 29.500 for the description of the Transport and HTTP/2 protocol requirements and for the security requirements.

6.1.2.2 HTTP Standard Headers

6.1.2.2.1 General

6.1.2.2.2 Content type

This subclause will indicate the encoding of HTTP requests/responses and the applicable MIME media type for the related Content-Type header.

6.1.2.3 HTTP custom headers

6.1.2.3.1 General

This clause will list, if applicable, the possible reused HTTP custom headers and the definition of new HTTP custom headers introduced by this specification.

6.1.3 Resources

6.1.3.1 Overview

The structure of the Resource URIs of the NFManagement service is shown in Figure 6.1.3.1-1.

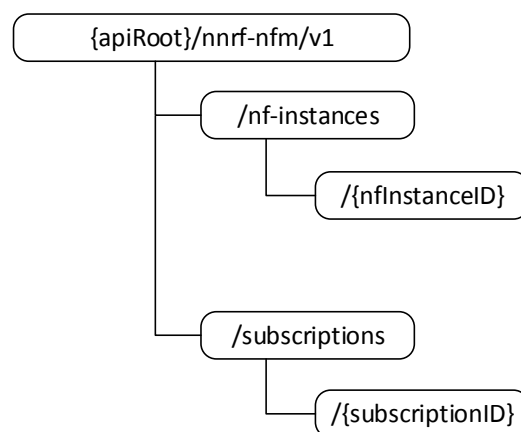

Figure 6.1.3.1-1: Resource URI structure of the NFManagement API

Table 6.1.3.1-1 provides an overview of the resources and applicable HTTP methods.

Table 6.1.3.1-1: Resources and methods overview

Resource name	Resource URI	HTTP method or custom operation	Description
nf-instances (Store)	{apiRoot}/nnrf-nfm/v1/nf-instances	GET	Read a collection of NF Instances.
nf-instance (Document)	{apiRoot}/nnrf-nfm/v1/nf-instances/{nfInstanceId}	GET	Read the profile of a given NF Instance.
		PUT	Register in NRF a new NF Instance, or replace the profile of an existing NF Instance, by providing an NF profile.
		PATCH	Modify the NF profile of an existing NF Instance.
		DELETE	Deregister from NRF a given NF Instance.
subscriptions (Collection)	{apiRoot}/nnrf-nfm/v1/subscriptions	POST	Creates a new subscription in NRF to newly registered NF Instances.
subscription (Document)	{apiRoot}/nnrf-nfm/v1/subscriptions/{subscriptionID}	DELETE	Deletes an existing subscription from NRF.
Notification Callback	{nfStatusNotificationUri}	POST	Notify about newly created NF Instances, or about changes of the profile of a given NF Instance.

6.1.3.2 Resource: nf-instances (Store)

6.1.3.2.1 Description

This resource represents a collection of the different NF instances registered in the NRF.

This resource is modelled as the Store resource archetype (see subclause C.3 of 3GPP TS 29.501 [5]).

6.1.3.2.2 Resource Definition

Resource URI: **{apiRoot}/nnrf-nfm/v1/nf-instances**

This resource shall support the resource URI variables defined in table 6.1.3.2.2-1.

Table 6.1.3.2.2-1: Resource URI variables for this resource

Name	Definition
apiRoot	See subclause 6.1.1

6.1.3.2.3 Resource Standard Methods

6.1.3.2.3.1 GET

This method retrieves a list of all NF instances currently registered in the NRF. This method shall support the URI query parameters specified in table 6.1.3.2.3.1-1.

Table 6.1.3.2.3.1-1: URI query parameters supported by the GET method on this resource

Name	Data type	P	Cardinality	Description
nf-type	NFType	O	0..1	The type of NF to restrict the list of returned NF Instances.
limit	integer	O	0..1	Maximum number of items to be returned in this query.

This method shall support the request data structures specified in table 6.1.3.2.3.1-2 and the response data structures and response codes specified in table 6.1.3.2.3.1-3.

Table 6.1.3.2.3.1-2: Data structures supported by the GET Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.1.3.2.3.1-3: Data structures supported by the GET Response Body on this resource

Data type	P	Cardinality	Response codes	Description
Uri	M	1..N	200 OK	The response body contains an array of URIs for each registered NF in the NRF.
ProblemDetails	M	1	404 Not Found	This status code shall be returned if the queried NF type does not have any NF instances registered with the NRF.

6.1.3.2.4 Resource Custom Operations

The following subclauses will specify the custom operations supported by the resource.

It will describe, for each custom operation, the use and the URI of the operation, the HTTP method on which it is mapped, request and response data structures and response codes, and if applicable, HTTP headers specific to the operation.

6.1.3.2.4.1 Overview

Table 6.1.3.2.4.1-1: Custom operations

Custom operation URI	Mapped HTTP method	Description

6.1.3.2.4.2 Operation: <operation 1>

This subclause will specify the meaning of the operation applied on the resource.

6.1.3.2.4.2.1 Description

This subclause will describe the custom operation and what it is used for, and the custom operation's URI.

6.1.3.2.4.2.2 Operation Definition

This subclause will specify the custom operation and the HTTP method on which it is mapped.

This operation shall support the request data structures specified in table 6.1.3.2.4.2.2-1 and the response data structure and response codes specified in table 6.1.3.2.4.2.2-2.

Table 6.1.3.2.4.2.2-1: Data structures supported by the <e.g. POST> Request Body on this resource

Data type	P	Cardinality	Description
<type> or n/a	<M, C or O>	<1 (i.e. object)> or <0..N, 1..N, m..n (i.e. array)> or <leave empty>	<only if applicable>

Table 6.1.3.2.4.2.2-2: Data structures supported by the <e.g. POST> Response Body on this resource

Data type	P	Cardinality	Response codes	Description
<type> or n/a	<M, C or O>	<1 (i.e. object)> or <0..N, 1..N, m..n (i.e. array)> or <leave empty>	<list applicable codes with name from IETF RFC 7231, etc.>	<Meaning of the success case> or <Meaning of the error case with additional statement regarding error handling>

6.1.3.2.4.3 Operation: <operation 2>

And so on if there are more than two operations supported by the resource. Same structure as in subclause 6.1.3.2.4.1.

6.1.3.3 Resource: nf-instance (Document)

6.1.3.3.1 Description

This resource represents a single NF instance.

6.1.3.3.2 Resource Definition

Resource URI: {apiRoot}/nnrf-nfm/v1/nf-instances/{nfInstanceID}

This resource shall support the resource URI variables defined in table 6.1.3.3.2-1.

Table 6.1.3.3.2-1: Resource URI variables for this resource

Name	Definition
apiRoot	See subclause 6.1.1
nfInstanceID	Represents a specific NF Instance

6.1.3.3.3 Resource Standard Methods

6.1.3.3.3.1 GET

This method retrieves the NF Profile of a given NF instance.

This method shall support the URI query parameters specified in table 6.1.3.3.3.1-1.

Table 6.1.3.3.3.1-1: URI query parameters supported by the GET method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.1.3.3.3.1-2 and the response data structures and response codes specified in table 6.1.3.3.3.1-3.

Table 6.1.3.3.3.1-2: Data structures supported by the GET Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.1.3.3.3.1-3: Data structures supported by the GET Response Body on this resource

Data type	P	Cardinality	Response codes	Description
NFProfile	M	1	200 OK	The response body contains the profile of a given NF Instance.
ProblemDetails	M	1	403 Forbidden	The NF Service Consumer is not allowed to query the instances of this NF type.

6.1.3.3.3.2 PUT

This method registers a new NF instance in the NRF, or replaces completely an existing NF instance.

This method shall support the URI query parameters specified in table 6.1.3.3.3.2-1.

Table 6.1.3.3.3.2-1: URI query parameters supported by the PUT method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.1.3.3.3.2-2 and the response data structures and response codes specified in table 6.1.3.3.3.2-3.

Table 6.1.3.3.3.2-2: Data structures supported by the PUT Request Body on this resource

Data type	P	Cardinality	Description
NFProfile	M	1	Profile of the NF Instance to be registered, or completely replaced, in NRF.

Table 6.1.3.3.3.2-3: Data structures supported by the PUT Response Body on this resource

Data type	P	Cardinality	Response codes	Description
NFProfile	M	1	200 OK	This case represents the successful replacement of an existing NF Instance profile. Upon success, a response body is returned containing the replaced profile of the NF Instance.
NFRegistrationData	M	1	201 Created	This case represents the successful registration of a new NF Instance. Upon success, a response body is returned containing a heart-beat timer and the newly created NF Instance profile; also, the HTTP response shall include a "Location" HTTP header that contains the resource URI of the created NF Instance.
ProblemDetails	M	1	400 Bad Request	This case represents the failure registration of a new NF Instance, because of input parameter error.
ProblemDetails	M	1	500 Internal Server Error	This case represents the failure in the registration of a new NF Instance, because of a server internal error.

6.1.3.3.3.3 PATCH

This method updates partially the profile of a given NF instance.

This method shall support the URI query parameters specified in table 6.1.3.3.3.3-1.

Table 6.1.3.3.3.3-1: URI query parameters supported by the PATCH method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.1.3.3.3.3-2 and the response data structures and response codes specified in table 6.1.3.3.3.3-3.

Table 6.1.3.3.3.3-2: Data structures supported by the PATCH Request Body on this resource

Data type	P	Cardinality	Description
PatchDocument	M	1	It contains the list of changes to be made to the profile of the NF Instance, according to the JSON PATCH format specified in IETF RFC 6902 [13].

Table 6.1.3.3.3.3-3: Data structures supported by the PATCH Response Body on this resource

Data type	P	Cardinality	Response codes	Description
NFProfile	M	1	200 OK	Upon success, a response body is returned containing the updated profile of the NF Instance.

6.1.3.3.3.4 DELETE

This method deregisters an existing NF instance from the NRF.

This method shall support the URI query parameters specified in table 6.1.3.3.3.4-1.

Table 6.1.3.3.3.4-1: URI query parameters supported by the DELETE method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.1.3.3.3.4-2 and the response data structures and response codes specified in table 6.1.3.3.3.4-3.

Table 6.1.3.3.3.4-2: Data structures supported by the DELETE Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.1.3.3.3.4-3: Data structures supported by the DELETE Response Body on this resource

Data type	P	Cardinality	Response codes	Description
n/a			204 No Content	

6.1.3.4 Resource: subscriptions (Collection)

6.1.3.4.1 Description

This resource represents a collection of subscriptions of NF Instances to newly registered NF Instances.

6.1.3.4.2 Resource Definition

Resource URI: **{apiRoot}/nnrf-nfm/v1/subscriptions**

This resource shall support the resource URI variables defined in table 6.1.3.4.2-1.

Table 6.1.3.4.2-1: Resource URI variables for this resource

Name	Definition
apiRoot	See subclause 6.1.1

6.1.3.4.3 Resource Standard Methods

6.1.3.4.3.1 POST

This method creates a new subscription. This method shall support the URI query parameters specified in table 6.1.3.4.3.1-1.

Table 6.1.3.4.3.1-1: URI query parameters supported by the POST method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.1.3.4.3.1-2 and the response data structures and response codes specified in table 6.1.3.4.3.1-3.

Table 6.1.3.4.3.1-2: Data structures supported by the POST Request Body on this resource

Data type	P	Cardinality	Description
SubscriptionData	M	1	The request body contains the input parameters for the subscription. These parameters include, e.g.: - Target NF type - Target Service Name - Callback URI of the Requester NF

Table 6.1.3.4.3.1-3: Data structures supported by the POST Response Body on this resource

Data type	P	Cardinality	Response codes	Description
SubscriptionData	M	1	201 Created	This case represents the successful creation of a subscription. Upon success, the HTTP response shall include a "Location" HTTP header that contains the resource URI of the created resource.

6.1.3.5 Resource: subscription (Document)

6.1.3.5.1 Description

This resource represents an individual subscription of a given NF Instance to newly registered NF Instances.

6.1.3.5.2 Resource Definition

Resource URI: {apiRoot}/nnrf-nfm/v1/subscriptions/{subscriptionID}

This resource shall support the resource URI variables defined in table 6.1.3.5.2-1.

Table 6.1.3.5.2-1: Resource URI variables for this resource

Name	Definition
apiRoot	See subclause 6.1.1
subscriptionID	Represents a specific subscription

6.1.3.5.3 Resource Standard Methods

6.1.3.5.3.1 DELETE

This method terminates an existing subscription. This method shall support the URI query parameters specified in table 6.1.3.5.3.1-1.

Table 6.1.3.5.3.1-1: URI query parameters supported by the DELETE method on this resource

Name	Data type	P	Cardinality	Description
n/a				

This method shall support the request data structures specified in table 6.1.3.5.3.1-2 and the response data structures and response codes specified in table 6.1.3.5.3.1-3.

Table 6.1.3.5.3.1-2: Data structures supported by the DELETE Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.1.3.5.3.1-3: Data structures supported by the DELETE Response Body on this resource

Data type	P	Cardinality	Response codes	Description
n/a			204 No Content	

6.1.4 Custom Operations without associated resources

6.1.4.1 Overview

This subclause will specify custom operations without any associated resource (i.e. RPC) supported by this API.

Table 6.1.4.1-1: Custom operations without associated resources

Custom operation URI	Mapped HTTP method	Description

6.1.4.2 Operation: <operation 1>

Where <operation 1> is to be replaced by the name of the custom operation, e.g. Authentication_Information_Request.

It will describe, for each custom operation, the use and the URI of the operation, the HTTP method on which it is mapped, request and response data structures and response codes, and if applicable, HTTP headers specific to the operation.

6.1.4.2.1 Description

This subclause will describe the custom operation and what it is used for, and the custom operation's URI.

6.1.4.2.2 Operation Definition

This subclause will specify the custom operation and the HTTP method on which it is mapped.

This operation shall support the response data structures and response codes specified in tables 6.1.4.2.2-1 and 6.1.4.2.2-2.

Table 6.1.4.2.2-1: Data structures supported by the <e.g. POST> Request Body on this resource

Data type	P	Cardinality	Description
<type> or n/a	<M, C or O>	<1 (i.e. object)> or <0..N, 1..N, m..n (i.e. array)> or <leave empty>	<only if applicable>

Table 6.1.4.2.2-2: Data structures supported by the <e.g. POST> Response Body on this resource

Data type	P	Cardinality	Response codes	Description
<type> or n/a	<M, C or O>	<1 (i.e. object)> or <0..N, 1..N, m..n (i.e. array)> or <leave empty>	<list applicable codes with name from IETF RFC 7231, etc.>	<Meaning of the success case> or <Meaning of the error case with additional statement regarding error handling>

6.1.4.3 Operation: <operation 2>

And so on if there are more than two custom operations supported by the service. Same structure as in subclause 6.1.4.2.

6.1.5 Notifications

6.1.5.1 General

This subclause specifies the notifications provided by the Nnrf_NFManagement service.

The delivery of notifications shall be supported as specified in subclause 6.2 of 3GPP TS 29.500 [4] for Server-initiated communication.

Table 6.1.5.1-1: Notifications overview

Notification	Resource URI	HTTP method or custom operation	Description (service operation)
NF Instance Status Notification	{nfStatusNotificationUri} (NF Service Consumer provided callback reference)	POST	Notify about registrations / deregistrations or profile changes of NF Instances

6.1.5.2 NF Instance Status Notification

6.1.5.2.1 Description

The NF Service Consumer provides a callback URI for getting notified about NF Instances status events, the NRF shall notify the NF Service Consumer, when the conditions specified in the subscription are met.

6.1.5.2.2 Notification Definition

The POST method shall be used for NF Instance Status notification and the URI shall be the callback reference provided by the NF Service Consumer during the subscription to this notification.

Resource URI: {nfStatusNotificationUri}

Support of URI query parameters is specified in table 6.1.5.2.2-1.

Table 6.1.5.2.2-1: URI query parameters supported by the POST method

Name	Data type	P	Cardinality	Description
n/a				

Support of request data structures is specified in table 6.1.5.2.2-2, and support of response data structures and response codes is specified in table 6.1.5.2-3.

Table 6.1.5.2.2-2: Data structures supported by the POST Request Body

Data type	P	Cardinality	Description
NotificationData	M	1	Representation of the SM context status notification.

Table 6.1.5.2.2-3: Data structures supported by the POST Response Body

Data type	P	Cardinality	Response codes	Description
N/A			204 No Content	This case represents a successful notification of the NF Instance status event.

6.1.6 Data Model

6.1.6.1 General

This subclause specifies the application data model supported by the API.

Table 6.1.6.1-1 specifies the data types defined for the Nnrf service based interface protocol.

Table 6.1.6.1-1: Nnrf_NFManagement specific Data Types

Data type	Section defined	Description
NFProfile	6.1.6.2.2	
NFService	6.1.6.2.3	
DefaultNotificationSubscription	6.1.6.2.4	Data structure for specifying the notifications the NF service subscribes by default along with callback URI.
IpEndPoint	6.1.6.2.5	
UdrInfo	6.1.6.2.6	
UdmInfo	6.1.6.2.7	
AusfInfo	6.1.6.2.8	
SupiRange	6.1.6.2.9	
IdentityRange	6.1.6.2.10	
AmfInfo	6.1.6.2.11	
SmfInfo	6.1.6.2.12	
UpfInfo	6.1.6.2.13	Information related to UPF
SnssaiUpfInfoItem	6.1.6.2.14	
DnnUpfInfoItem	6.1.6.2.15	
SubscriptionData	6.1.6.2.16	
NotificationData	6.1.6.2.17	
NFRegistrationData	6.1.6.2.18	
NFServiceVersion	6.1.6.2.19	Contains the version details of an NF service.
PcfInfo	6.1.6.2.20	
BsfInfo	6.1.6.2.21	
Ipv4AddressRange	6.1.6.2.22	
Ipv6PrefixRange	6.1.6.2.23	
InterfaceUpfInfoItem	6.1.6.2.24	
Fqdn	6.1.6.3.2	
NFType	6.1.6.3.3	
NotificationType	6.1.6.3.4	
TransportProtocol	6.1.6.3.5	
NotificationEventType	6.1.6.3.6	
NFStatus	6.1.6.3.7	
DataSetId	6.1.6.3.8	
UPInterfaceType	6.1.6.3.9	

Table 6.1.6.1-2 specifies data types re-used by the Nnrf service based interface protocol from other specifications, including a reference to their respective specifications and when needed, a short description of their use within the Nnrf service based interface.

Table 6.1.6.1-2: Nnrf_NFManagement re-used Data Types

Data type	Reference	Comments
N1MessageClass	3GPP TS 29.518 [6]	The N1 message type
N2InformationClass	3GPP TS 29.518 [6]	The N2 information type
IPv4Addr	3GPP TS 29.571 [7]	
IPv6Addr	3GPP TS 29.571 [7]	
IPv6Prefix	3GPP TS 29.571 [7]	
Uri	3GPP TS 29.571 [7]	
Dnn	3GPP TS 29.571 [7]	
SupportedFeatures	3GPP TS 29.571 [7]	
Snssai	3GPP TS 29.571 [7]	
PlmnId	3GPP TS 29.571 [7]	
Guami	3GPP TS 29.571 [7]	
Tai	3GPP TS 29.571 [7]	
Ecgi	3GPP TS 29.571 [7]	
NfInstanceId	3GPP TS 29.571 [7]	

6.1.6.2 Structured data types

6.1.6.2.1 Introduction

This subclause defines the structures to be used in resource representations.

Allowed structures are: array, object.

6.1.6.2.2 Type: NFProfile

Table 6.1.6.2.2-1: Definition of type NFProfile

Attribute name	Data type	P	Cardinality	Description
nfInstanceId	NfInstanceId	M	1	Unique identity of the NF Instance.
nfType	NFType	M	1	Type of Network Function
nfStatus	NFStatus	M	1	Status of the NF Instance
plmn	PlmnId	O	0..1	PLMN of the Network Function
sNssais	array(Snssai)	O	0..N	NSSAIs of the Network Function
nsiList	array(string)	O	0..1	NSI identities of the Network Function
fqdn	Fqdn	C	0..1	FQDN of the Network Function (NOTE 1, NOTE 2)
interPlmnFqdn	Fqdn	C	0..1	If the NF needs to be discoverable by other NFs in a different PLMN, then an FQDN that is used for inter PLMN routing as specified in 3GPP TS 23.003 [12] shall be registered with the NRF.
ipv4Addresses	array(Ipv4Addr)	C	0..N	IPv4 address(es) of the Network Function (NOTE 1, NOTE 2)
ipv6Addresses	array(Ipv6Addr)	C	0..N	IPv6 address(es) of the Network Function (NOTE 1, NOTE 2)
ipv6Prefixes	array(Ipv6Prefix)	C	0..N	IPv6 prefix of the Network Function (NOTE 1, NOTE 2)
capacity	integer	O	0..1	Static capacity information, expressed as a weight relative to other NF instances of the same type
load	integer	O	0..1	Dynamic load information, ranged from 0 to 100, indicates the current load percentage of the NF.
locality	string	O	0..1	Operator defined information about the location of the NF instance (e.g. geographic location, data center) (NOTE 3)
udrInfo	UdrInfo	O	0..1	Specific data for the UDR (ranges of SUPI, group ID ...)
udmInfo	UdmInfo	O	0..1	Specific data for the UDM (ranges of SUPI, group ID...)
ausfInfo	AusfInfo	O	0..1	Specific data for the AUSF (ranges of SUPI, group ID...)
amfInfo	AmfInfo	O	0..1	Specific data for the AMF (AMF Set ID, ...)
smfInfo	smfInfo	O	0..1	Specific data for the SMF (DNN's, ...)
upfInfo	UpfInfo	O	0..1	Specific data for the UPF (S-NSSAI, DNN, SMF serving area, interface...)
pcfInfo	PcfInfo	O	0..1	Specific data for the PCF
bsfInfo	BsfInfo	O	0..1	Specific data for the BSF
nfServices	array(NFService)	O	0..N	List of NF Service Instances
NOTE 1: At least one of the addressing parameters (fqdn, ipv4address, ipv6address and ipv6Prefix) shall be included in the NF Profile.				
NOTE 2: If the type of Network Function is UPF, the addressing information is for the UPF N4 interface.				
NOTE 3: A requester NF may use this information to select a NF instance (e.g. a NF instance preferably located in the same data center).				

Editor's Note: The attributes related to specific NFs are not complete yet. Also, it is FFS whether NF-specific parameters are needed at NF service instance level.

6.1.6.2.3 Type: NFService

Table 6.1.6.2.3-1: Definition of type NFService

Attribute name	Data type	P	Cardinality	Description
serviceInstanceID	string	M	1	Unique ID of the service instance within a given NF Instance
serviceName	string	M	1	Name of the service instance (e.g. "nudm-sdm")
version	array(NFService Version)	M	1..N	The API versions supported by the NF Service and if available, the corresponding retirement date of the NF Service.
schema	string	M	1	Protocol schema (e.g. "http", "https")
fqdn	Fqdn	O	0..1	FQDN of the NF where the service is hosted (see NOTE 1)
interPlmnFqdn	Fqdn	O	0..1	If the NF service needs to be discoverable by other NFs in a different PLMN, then an FQDN that is used for inter PLMN routing as specified in 3GPP TS 23.003 [12] may be registered with the NRF (see NOTE 1).
ipEndPoints	array(IpEndPoint)	O	0..N	IP address(es) and port information of the Network Function (including IPv4 and/or IPv6 address) where the service is listening for incoming service requests (see NOTE 1)
apiPrefix	string	O	0..1	Optional path segment(s) used to construct the {apiRoot} variable of the different API URIs, as described in 3GPP TS 29.501 [3], subclause 4.4.1
defaultNotificationSubscriptions	array(DefaultNotificationSubscription)	O	0..N	Notification endpoints for different notification types.
allowedPlmns	array(PlmnId)	O	0..N	PLMNs allowed to access the service instance
allowedNfTypes	array(NFType)	O	0..N	Type of the NFs allowed to access the service instance
allowedDomains	array(string)	O	0..N	Pattern (regular expression according to the ECMA-262 dialect [8]) representing the NF domain names allowed to access the service instance.
allowedNssais	array(Snssai)	O	0..N	NSSAI of the allowed slices to access the service instance
capacity	integer	O	0..1	Static capacity information, expressed as a weight relative to other services of the same type
load	integer	O	0..1	Dynamic load information, ranged from 0 to 100, indicates the current load percentage of the NF Service.
supportedFeatures	SupportedFeatures	O	0..1	Supported Features of the NF Service instance
NOTE 1: If the fqdn, interPlmnFqdn and ipEndpoint attributes are not present, the FQDN and IP address related attributes from the NF Profile shall be used to construct the API URIs of this service.				

6.1.6.2.4 Type: DefaultNotificationSubscription

Table 6.1.6.2.4-1: Definition of type DefaultNotificationSubscription

Attribute name	Data type	P	Cardinality	Description
notificationType	NotificationType	M	1	Type of notification for which the corresponding callback URI is provided.
callbackUri	Uri	M	1	The callback URI.
n1MessageClass	N1MessageClass	C	0..1	If the notification type is N1_MESSAGES, this IE shall be present and shall identify the class of N1 messages to be notified.
n2InformationClass	N2InformationClass	C	0..1	If the notification type is N2_INFORMATION, this IE shall be present and shall identify the class of N2 information to be notified.

6.1.6.2.5 Type: IpEndPoint

Table 6.1.6.2.5-1: Definition of type IpEndPoint

Attribute name	Data type	P	Cardinality	Description
ipv4Address	Ipv4Addr	C	0..1	IPv4 address (NOTE 1)
ipv6Address	Ipv6Addr	C	0..1	IPv6 address (NOTE 1)
ipv6Prefix	Ipv6Prefix	C	0..1	IPv6 prefix (NOTE 1)
transport	TransportProtocol	O	0..1	Transport protocol
port	integer	O	0..1	Port number
NOTE 1: At most one occurrence of either ipv4Address, ipv6Address or ipv6Prefix shall be included in this data structure.				

6.1.6.2.6 Type: UdrInfo

Table 6.1.6.2.6-1: Definition of type UdrInfo

Attribute name	Data type	P	Cardinality	Description
groupid	string	O	0..1	Identity of the UDR group that is served by the UDR instance
supiRanges	array(SupiRange)	O	0..N	List of ranges of SUPI's whose profile data is available in the UDR instance (NOTE 1)
gpsiRanges	array(IdentityRange)	O	0..N	List of ranges of GPSIs whose profile data is available in the UDR instance (NOTE 1)
externalGroupIdentifiers Ranges	array(IdentityRange)	O	0..N	List of ranges of external groups whose profile data is available in the UDR instance (NOTE 1)
supportedDataSets	array(DataSetId)	O	0..N	List of supported data sets in the UDR instance
NOTE 1: If none of these parameters is provided, the UDR can serve any external group and any SUPI or GPSI.				

6.1.6.2.7 Type: UdmInfo

Table 6.1.6.2.7-1: Definition of type UdmInfo

Attribute name	Data type	P	Cardinality	Description
groupid	String	O	0..1	Identity of the UDM group that is served by the UDM instance
supiRanges	array(SupiRange)	O	0..N	List of ranges of SUPIs whose profile data is available in the UDM instance (NOTE 1)
gpsiRanges	array(IdentityRange)	O	0..N	List of ranges of GPSIs whose profile data is available in the UDM instance (NOTE 1)
externalGroupIdentifiers Ranges	array(IdentityRange)	O	0..N	List of ranges of external groups whose profile data is available in the UDM instance (NOTE 1)
routingIndicator	string	O	0..1	Routing Indicator information that allows to route network signalling with SUCI (see 3GPP TS 23.003 [12]) to the UDM instance.
NOTE 1: If none of these parameters is provided, the UDM can serve any external group and any SUPI or GPSI.				

6.1.6.2.8 Type: AusfInfo

Table 6.1.6.2.8-1: Definition of type AusfInfo

Attribute name	Data type	P	Cardinality	Description
groupid	string	O	0..1	Identity of the AUSF group
supiRanges	array(SupiRange)	O	0..N	List of ranges of SUPIs that can be served by the AUSF instance. If not provided, the AUSF can serve any SUPI.
routingIndicator	string	O	0..1	Routing Indicator information that allows to route network signalling with SUCI (see 3GPP TS 23.003 [12]) to the AUSF instance.

6.1.6.2.9 Type: SupiRange

Table 6.1.6.2.9-1: Definition of type SupiRange

Attribute name	Data type	P	Cardinality	Description
start	string	O	0..1	First value identifying the start of a SUPI range, to be used when the range of SUPI's can be represented as a numeric range (e.g., IMSI ranges). This string shall consist only of digits. Pattern: " $^{\wedge}d+$$ "
end	string	O	0..1	Last value identifying the end of a SUPI range, to be used when the range of SUPI's can be represented as a numeric range (e.g. IMSI ranges). This string shall consist only of digits. Pattern: " $^{\wedge}d+$$ "
pattern	string	O	0..1	Pattern (regular expression according to the ECMA-262 dialect [8]) representing the set of SUPI's belonging to this range. A SUPI value is considered part of the range if and only if the SUPI string fully matches the regular expression.

NOTE: Either the start and end attributes, or the pattern attribute, shall be present.

EXAMPLE 1: IMSI range. From: 123 45 6789040000 To: 123 45 6789059999 (i.e., 20,000 IMSI numbers)
JSON: { "start": "123456789040000", "end": "123456789059999" }

EXAMPLE 2: IMSI range. From: 123 45 6789040000 To: 123 45 6789049999 (i.e., 10,000 IMSI numbers)
JSON: { "pattern": " $^{\wedge}imsi-12345678904\d{4}$$ " }, or
JSON: { "start": "123456789040000", "end": "123456789049999" }

EXAMPLE 3: NAI range. "[smartmeter-*factoryID*@company.com](#)" where "*factoryID*" can be any string.
JSON: { "pattern": " [\$^{\wedge}nai-smartmeter-.\+@company.com\$\$](#) " }

6.1.6.2.10 Type: IdentityRange

Table 6.1.6.2.10-1: Definition of type IdentityRange

Attribute name	Data type	P	Cardinality	Description
start	string	O	0..1	First value identifying the start of an identity range, to be used when the range of identities can be represented as a numeric range (e.g., MSISDN ranges). This string shall consist only of digits. Pattern: " $^{\wedge}d+$$ "
end	string	O	0..1	Last value identifying the end of an identity range, to be used when the range of identities can be represented as a numeric range (e.g. MSISDN ranges). This string shall consist only of digits. Pattern: " $^{\wedge}d+$$ "
pattern	String	O	0..1	Pattern (regular expression according to the ECMA-262 dialect [8]) representing the set of identities belonging to this range. An identity value is considered part of the range if and only if the identity string fully matches the regular expression. To be used when identity is External Identifier or External Group Identifier or MSISDN.

NOTE: Either the start and end attributes, or the pattern attribute, shall be present.

6.1.6.2.11 Type: AmfInfo

Table 6.1.6.2.11-1: Definition of type AmfInfo

Attribute name	Data type	P	Cardinality	Description
amfRegionId	string	M	1	AMF region identifier
amfSetId	string	M	1	AMF set identifier.
guamiList	array(Guami)	M	1..N	List of supported GUAMIs
tailList	array(Tai)	O	0..N	The list of TAIs the AMF can serve
backupInfoAmfFailure	array(Guami)	O	0..N	List of GUAMIs for which the AMF acts as a backup for AMF failure
backupInfoAmfRemoval	array(Guami)	O	0..N	List of GUAMIs for which the AMF acts as a backup for planned AMF removal

6.1.6.2.12 Type: SmfInfo

Table 6.1.6.2.12-1: Definition of type SmfInfo

Attribute name	Data type	P	Cardinality	Description
dnnList	array(Dnn)	M	1..N	DNNs supported by the SMF
tailList	array(Tai)	O	0..N	The list of TAIs the SMF can serve. It may contain the non-3GPP access' TAI. The absence of this attribute indicates that the SMF can be selected for any TAI in the serving network.
pgwFqdn	Fqdn	O	0..1	The FQDN of the PGW if the SMF is a combined SMF/PGW-C.

6.1.6.2.13 Type: UpfInfo

Table 6.1.6.2.13-1: Definition of type UpfInfo

Attribute name	Data type	P	Cardinality	Description
sNssaiUpfInfoList	array(SnssaiUpfInfoItem)	M	1..N	List of parameters supported by the UPF per S-NSSAI
smfServingArea	array(string)	O	0..N	The SMF service area(s) the SMF can serve
interfaceUpfInfoList	array(InterfaceUpfInfoItem)	O	0..N	List of User Plane interfaces configured on the UPF. When this IE is provided in the NF Discovery response, the NF Service Consumer (e.g SMF) may use this information for UPF selection.

6.1.6.2.14 Type: SnssaiUpfInfoItem

Table 6.1.6.2.14-1: Definition of type SnssaiUpfInfoItem

Attribute name	Data type	P	Cardinality	Description
sNssai	Snssai	M	1	Supported S-NSSAI
dnnUpfInfoList	array(DnnUpfInfoItem)	M	1..N	List of parameters supported by the UPF per DNN

6.1.6.2.15 Type: DnnUpfInfoItem

Table 6.1.6.2.15-1: Definition of type DnnUpfInfoItem

Attribute name	Data type	P	Cardinality	Description
dnn	Dnn	M	1	Supported DNN

6.1.6.2.16 Type: SubscriptionData

Table 6.1.6.2.16-1: Definition of type SubscriptionData

Attribute name	Data type	P	Cardinality	Description
nfStatusNotificationUri	Uri	M	1	Callback URI where the NF Service Consumer will receive the notifications from NRF.
reqNotifEvents	array(Notification EventType)	O	0..N	If present, this attribute shall contain the list of event types that the NF Service Consumer is interested in receiving. If this attribute is not present, it means that notifications for all event types are requested.
nfInstancelId	string	O	0..1	If present, this attribute contains the NF Instance ID of a specific NF Instance, whose status is requested to be monitored. If this attribute is present, "nfType", "serviceName" and "nfSetId" shall be absent.
nfType	NFType	O	0..1	If present, this attribute contains the NF type of the NFs whose status is requested to be monitored. If this attribute is present, "nfInstancelId" shall be absent.
serviceName	string	O	0..1	If present, this attribute contains the service name of those NFs that offer such service, whose status is requested to be monitored. If this attribute is present, "nfInstancelId" shall be absent.
nfSetId	string	O	0..1	If present, this attribute contains the NF set identifier of those NFs having a certain "NF Set ID" attribute in their profile, whose status is requested to be monitored. If this attribute is present, "nfInstancelId" shall be absent.
plmnId	PlmnId	O	0..1	If present, this attribute contains the target PLMN ID of the NF Instance(s) whose status is requested to be monitored.

6.1.6.2.17 Type: NotificationData

Table 6.1.6.2.17-1: Definition of type NotificationData

Attribute name	Data type	P	Cardinality	Description
event	NotificationEventType	M	1	Notification type. It shall take the values "NF_REGISTERED", "NF_DEREGISTERED" OR "NF_PROFILE_CHANGED".
nfInstanceUri	Uri	O	0..1	Uri of the NF Instance associated to the notification event.
nfProfile	NFProfile	O	0..1	Updated NF Profile; only present when the notification type is "NF_PROFILE_CHANGED".

6.1.6.2.18 Type: NFRegistrationData

Table 6.1.6.2.18-1: Definition of type NFRegistrationData

Attribute name	Data type	P	Cardinality	Description
heartBeatTimer	integer	M	1	Time in seconds expected between 2 consecutive heart-beat messages from an NF Instance to the NRF
nfProfile	NFProfile	M	1	Profile of the registered NF Instance

6.1.6.2.19 Type: NFServiceVersion

Table 6.1.6.2.19-1: Definition of type NFRegistrationData

Attribute name	Data type	P	Cardinality	Description
apiVersionInUri	string	M	1	Version of the service instance to be used in the URI for accessing the API (e.g. "v1").
apiFullVersion	string	M	1	Full version number of the API as specified in subclause 4.3.1 of 3GPP TS 29.501 [3].
expiry	DateTime	O	0..1	Expiry date and time of the NF service. This represents the planned retirement date as specified in subclause 4.3.1.5 of 3GPP TS 29.501 [3].

6.1.6.2.20 Type: PcfInfo

Table 6.1.6.2.20-1: Definition of type PcfInfo

Attribute name	Data type	P	Cardinality	Description
dnnList	array(Dnn)	O	0..N	DNNs supported by the PCF

6.1.6.2.21 Type: BsflInfo

Table 6.1.6.2.21-1: Definition of type BsflInfo

Attribute name	Data type	P	Cardinality	Description
ipv4AddressRanges	array(Ipv4AddressRange)	O	0..N	List of ranges of IPv4 addresses handled by BSF
ipv6PrefixRanges	array(Ipv6PrefixRange)	O	0..N	List of ranges of IPv6 prefixes handled by BSF

6.1.6.2.22 Type: Ipv4AddressRange

Table 6.1.6.2.22-1: Definition of type IPv4AddressRange

Attribute name	Data type	P	Cardinality	Description
start	Ipv4Addr	M	1	First value identifying the start of an IPv4 address range
end	Ipv4Addr	M	1	Last value identifying the end of an IPv4 address range

6.1.6.2.23 Type: Ipv6PrefixRange

Table 6.1.6.2.23-1: Definition of type IPv6PrefixRange

Attribute name	Data type	P	Cardinality	Description
start	Ipv6Prefix	M	1	First value identifying the start of an IPv6 prefix range
end	Ipv6Prefix	M	1	Last value identifying the end of an IPv6 prefix range

6.1.6.2.24 Type: InterfaceUpfInfoltem

Table 6.1.6.2.24-1: Definition of type InterfaceUpfInfoltem

Attribute name	Data type	P	Cardinality	Description
interfaceType	UPInterfaceType	M	1	User Plane interface type
ipv4EndpointAddress	array(Ipv4Addr)	C	0..N	Available endpoint IPv4 address(es) of the User Plane interface (NOTE 1)
ipv6EndpointAddress	array(Ipv6Addr)	C	0..N	Available endpoint IPv6 address(es) of the User Plane interface (NOTE 1)
ipv6EndpointPrefix	array(Ipv6Prefix)	C	0..N	Available endpoint IPv6 prefix(es) of the User Plane interface (NOTE 1)
endpointFqdn	Fqdn	C	0..1	FQDN of available endpoint of the User Plane interface (NOTE 1)
networkInstance	string	O	0..1	Network Instance (See 3GPP TS 29.244 [15]) associated to the User Plane interface
NOTE 1: At least one of the addressing parameters (ipv4address, ipv6address, ipv6Prefix and endpointFqdn) shall be included in the InterfaceUpfInfoltem.				

6.1.6.3 Simple data types and enumerations

6.1.6.3.1 Introduction

This subclause defines simple data types and enumerations that can be referenced from data structures defined in the previous subclauses.

6.1.6.3.2 Simple data types

The simple data types defined in table 6.1.6.3.2-1 shall be supported.

Table 6.1.6.3.2-1: Simple data types

Type Name	Type Definition	Description
Fqdn	string	FQDN (Fully Qualified Domain Name)

6.1.6.3.3 Enumeration: NFType

The enumeration NFType represents the different types of Network Functions that can be found in the 5GC.

Table 6.1.6.3.3-1: Enumeration NFType

Enumeration value	Description
"NRF"	Network Function: NRF
"UDM"	Network Function: UDM
"AMF"	Network Function: AMF
"SMF"	Network Function: SMF
"AUSF"	Network Function: AUSF
"NEF"	Network Function: NEF
"PCF"	Network Function: PCF
"SMSF"	Network Function: SMSF
"NSSF"	Network Function: NSSF
"UDR"	Network Function: UDR
"LMF"	Network Function: LMF
"GMLC"	Network Function: GMLC
"5G_EIR"	Network Function: 5G-EIR
"SEPP"	Network Function: SEPP
"UPF"	Network Function: UPF
"N3IWF"	Network Function: N3IWF
"AF"	Network Function: AF
"UDSF"	Network Function: UDSF
"BSF"	Network Function: BSF
"CHF"	Network Function: CHF

6.1.6.3.4 Enumeration: NotificationType

Table 6.1.6.3.4-1: Enumeration NotificationType

Enumeration value	Description
"N1_MESSAGES"	Notification of N1 messages
"N2_INFORMATION"	Notification of N2 information
"LOCATION_NOTIFICATION"	Notification of Location Information by AMF towards NF Service Consumers (e.g GMLC)

6.1.6.3.5 Enumeration: TransportProtocol

Table 6.1.6.3.5-1: Enumeration TransportProtocol

Enumeration value	Description
"TCP"	Transport protocol: TCP

6.1.6.3.6 Enumeration: NotificationEventType

Table 6.1.6.3.6-1: Enumeration NotificationEventType

Enumeration value	Description
"NF_REGISTERED"	The NF Instance has been registered in NRF
"NF_DEREGISTERED"	The NF Instance has been deregistered from NRF
"NF_PROFILE_CHANGED"	The profile of the NF Instance has been modified

6.1.6.3.7 Enumeration: NFStatus

Table 6.1.6.3.7-1: Enumeration NFStatus

Enumeration value	Description
"REGISTERED"	The NF Instance is registered in NRF and can be discovered by other NFs
"SUSPENDED"	The NF Instance is registered in NRF but it is not fully operative and cannot be discovered by other NFs

Editor's Note: It is FFS to describe the usage of the "SUSPENDED" value of NFStatus.

6.1.6.3.8 Enumeration: DataSetId

The enumeration DataSetId represents the different types of data sets supported by an UDR instance.

Table 6.1.6.3.8-1: Enumeration DataSetId

Enumeration value	Description
"SUBSCRIPTION"	Data set: Subscription data
"POLICY"	Data set: Policy data
"EXPOSURE"	Data set: Structured data for exposure
"APPLICATION"	Data set: Application data

6.1.6.3.9 Enumeration: UPInterfaceType

Table 6.1.6.3.9-1: Enumeration UPInterfaceType

Enumeration value	Description
"N3"	User Plane Interface: N3
"N6"	User Plane Interface: N6
"N9"	User Plane Interface: N9

6.1.7 Error Handling

This subclause will include a reference to the general error handling principles specified in TS 29.501, and further specify any general error handling aspect specific to the API, if any Error handling specific to each method (and resource) is specified in subclauses 6.1.3. and 6.1.4.

6.1.8 Security

As indicated in 3GPP TS 33.501 [15], the access to the Nnrf_NFManagement API shall be authorized by means of the OAuth2 protocol (see IETF RFC 6749 [16]), using the "Client Credentials" authorization grant, where the NRF plays the role of the authorization server.

An NF Service Consumer, prior to consuming services offered by the Nnrf_NFManagement API, shall obtain a "token" from the authorization server, by invoking the Access Token Request service, as described in subclause 5.4.2.2.

NOTE: When multiple NRFs are deployed in a network, the NRF used as authorization server is the same NRF where the Nnrf_NFManagement service is invoked by the NF Service Producer.

The Nnrf_NFManagement API does not define any scopes for OAuth2 authorization.

6.2 Nnrf_NFDiscovery Service API

6.2.1 API URI

URIs of this API shall have the following root:

```
{apiRoot}/{apiName}/{apiVersion}/
```

where the "apiName" shall be set to "nnrf-disc" and the "apiVersion" shall be set to "v1" for the current version of this specification.

6.2.2 Usage of HTTP

6.2.2.1 General

HTTP/2, as defined in IETF RFC 7540 [9], shall be used as specified in clause 5 of 3GPP TS 29.500 [4].

HTTP/2 shall be transported as specified in subclause 5.3 of 3GPP TS 29.500 [4].

HTTP messages and bodies for the Nnrf_NFDiscovery service shall comply with the OpenAPI [10] specification contained in Annex A.

6.2.2.2 HTTP Standard Headers

6.2.2.2.1 General

The mandatory standard HTTP headers as specified in subclause 5.2.2.2 of 3GPP TS 29.500 [4] shall be supported.

6.2.2.2.2 Content type

The following content types shall be supported:

- The JSON format (IETF RFC 8259 [x]). The use of the JSON format shall be signalled by the content type "application/json". See also subclause 5.4 of 3GPP TS 29.500 [4].
- The Problem Details JSON Object (IETF RFC 7807 [11]). The use of the Problem Details JSON object in a HTTP response body shall be signalled by the content type "application/problem+json".

6.2.2.2.3 Cache-Control

A "Cache-Control" header should be included in HTTP responses, as described in IETF RFC 7234 [20], section 5.2. It shall contain a "max-age" value, indicating the amount of time in seconds after which the received response is considered stale; this value shall be the same as the content of the "validityPeriod" element described in subclause 6.2.6.2.2.

6.2.2.2.4 ETag

An "ETag" (entity-tag) header should be included in HTTP responses, as described in IETF RFC 7232 [19], section 2.3. It shall contain a server-generated strong validator, that allows further matching of this value (included in subsequent client requests) with a given resource representation stored in the server or in a cache.

6.2.2.2.5 If-None-Match

An NF Service Consumer should issue conditional GET request towards NRF, by including an If-None-Match header in HTTP requests, as described in IETF RFC 7232 [19], section 3.2, containing one or several entity tags received in previous responses for the same resource.

6.2.2.3 HTTP custom headers

6.2.2.3.1 General

This clause will list, if applicable, the possible reused HTTP custom headers and the definition of new HTTP custom headers introduced by this specification.

6.2.3 Resources

6.2.3.1 Overview

The structure of the Resource URIs of the NFDisccovery service is shown in Figure 6.2.3.1-1.

Figure 6.2.3.1-1: Resource URI structure of the NFDisccovery API

Table 6.2.3.1-1 provides an overview of the resources and applicable HTTP methods.

Table 6.2.3.1-1: Resources and methods overview

Resource name	Resource URI	HTTP method or custom operation	Description
nf-instances (Store)	{apiRoot}/nnrf-disc/v1/nf-instances	GET	Retrieve a collection of NF Instances according to certain filter criteria.

6.2.3.2 Resource: nf-instances (Store)

6.2.3.2.1 Description

This resource represents a collection of the different NF instances registered in the NRF.

This resource is modelled as the Store resource archetype (see subclause C.3 of 3GPP TS 29.501 [5]).

6.2.3.2.2 Resource Definition

Resource URI: **{apiRoot}/nnrf-disc/v1/nf-instances**

This resource shall support the resource URI variables defined in table 6.1.3.2.2-1.

Table 6.2.3.2-1: Resource URI variables for this resource

Name	Definition
apiRoot	See subclause 6.1.1

6.2.3.2.3 Resource Standard Methods

6.2.3.2.3.1 GET

This operation retrieves a list of NF Instances, and their offered services, currently registered in the NRF, satisfying a number of filter criteria, such as those NF Instances offering a certain service name, or those NF Instances of a given NF type (e.g., AMF).

Table 6.2.3.2.3.1-1: URI query parameters supported by the GET method on this resource

Name	Data type	P	Cardinality	Description
service-names	array(string)	M	1..N	This IE shall contain an array of service names for which the NRF is queried to provide the list of NF profiles. The NRF shall return the NF profiles that have at least one NF service matching the NF service names in this list. The NF service names returned by the NRF shall be an intersection of the NF service names requested and the NF service names registered in the NF profile.
target-nf-type	NFType	M	1	This IE shall contain the NF type of the NF Service Producer being discovered.
requester-nf-type	NFType	M	1	This IE shall contain the NF type of the NF Service Consumer that is invoking the Nnrf_NFDiscovery service.
requester-nf-instance-fqdn	Fqdn	O	0..1	FQDN of the NF Service Consumer that is invoking the Nnrf_NFDiscovery service.
target-plmn	PlmnId	C	0..1	This IE shall be included when NF services in a different PLMN need to be discovered. When included, this IE shall contain the PLMN ID of the different PLMN.
requester-plmn	PlmnId	C	0..1	This IE shall be included when NF services in a different PLMN need to be discovered. When included, this IE shall contain the PLMN ID of the requester NF.
target-nf-instance-id	NfInstanceId	O	0..1	Identity of the NF instance being discovered.
hnr-uri	Uri	O	0..1	Uri of the home NRF.
snssais	array(Snssai)	O	0..N	If included, this IE shall contain the list of S-NSSAI that are served by the services being discovered. The NRF shall use this to identify the NF services that have registered their support for these S-NSSAIs. The NRF shall return the NF profiles that have at least one S-NSSAI matching the S-NSSAIs in this list. The S-NSSAIs included in the NF services returned by the NRF shall be an intersection of the S-NSSAIs requested and the S-NSSAIs registered in the NF profile.
nsi-list	array(string)	O	0..N	If included, this IE shall contain the list of NSI IDs that are served by the services being discovered.
dnn	Dnn	O	0..1	If included, this IE shall contain the DNN for which NF services serving that DNN is discovered. DNN may be included if the target NF type is "SMF" or "UPF".
smf-serving-area	string	O	0..1	If included, this IE shall contain the serving area of the SMF. It may be included if the target NF type is "UPF".
tai	Tai	O	0..1	Tracking Area Identity.
ecgi	Ecgi	O	0..1	EPS Cell Global Identity.
ncgi	Ncgi	O	0..1	NR Cell Global Identity.
amf-region-id	string	O	0..1	AMF Region Identity.
amf-set-id	string	O	0..1	AMF Set Identity.
guami	Guami	O	0..1	Guami used to search for an appropriate AMF. (NOTE)
supi	Supi	O	0..1	If included, this IE shall contain the SUPI of the requester UE to search for an appropriate NF. SUPI may be included if the target NF type is "PCF", "UDM" or "UDR".
ue-ipv4-address	Ipv4Addr	O	0..1	The IPv4 address of the UE for which a BSF needs to be discovered.
ue-ipv6-prefix	Ipv6Prefix	O	0..1	The IPv6 prefix of the UE for which a BSF needs to be discovered.
pgw	Fqdn	O	0..1	If included, this IE shall contain the PGW FQDN which is received by the AMF from the MME to find the combined SMF/PGW.
gpsi	Gpsi	O	0..1	If included, this IE shall contain the GPSI of the requester UE to search for an appropriate NF. GPSI may be included if the target NF type is "UDM" or "UDR".
external-group-identity	GroupId	O	0..1	If included, this IE shall contain the external group identifier of the requester UE to search for an

				appropriate NF. This may be included if the target NF type is "UDM" or "UDR".
data-set	DataSetId	O	0..1	Indicates the data set to be supported by the NF to be discovered. May be included if the target NF type is "UDR".
routing-indicator	string	O	0..1	Routing Indicator information that allows to route network signalling with SUCI (see 3GPP TS 23.003 [12]) to an AUSF and UDM instance capable to serve the subscriber. May be included if the target NF type is "AUSF" or "UDM".
supported-features	SupportedFeatures	O	0..1	List of features required to be supported by the target Network Function.
NOTE: If this parameter is present and no AMF supporting the requested GUAMI is available due to AMF Failure or planned AMF removal, the NRF shall return in the response AMF instances acting as a backup for AMF failure or planned AMF removal respectively for this GUAMI.				

This method shall support the request data structures specified in table 6.1.3.2.3.1-2 and the response data structures and response codes specified in table 6.1.3.2.3.1-3.

Table 6.2.3.2.3.1-2: Data structures supported by the GET Request Body on this resource

Data type	P	Cardinality	Description
n/a			

Table 6.2.3.2.3.1-3: Data structures supported by the GET Response Body on this resource

Data type	P	Cardinality	Response codes	Description
SearchResult	M	1	200 OK	The response body contains the result of the search over the list of registered NF Instances.
ProblemDetails	M	1	400 Bad Request	The response body contains the error reason of the request message.
ProblemDetails	M	1	403 Forbidden	This response shall be returned if the NF Service Consumer is not allowed to discover the NF Service(s) being queried.
ProblemDetails	M	1	500 Internal Server Error	The response body contains the error reason of the request message.

6.2.3.2.4 Resource Custom Operations

6.2.4 Custom Operations without associated resources

There are no custom operations defined without any associated resources for the Nnrf_NFDiscovery service in this release of this specification.

6.2.5 Notifications

6.2.5.1 General

This subclause will specify the use of notifications and corresponding protocol details if required for the specific service. When notifications are supported by the API, it will include a reference to the general description of notifications support over the 5G SBIs specified in TS 29.500 / TS 29.501.

6.2.5.2 <notification 1>

6.2.5.3 <notification 2>

6.2.6 Data Model

6.2.6.1 General

This subclause specifies the application data model supported by the API.

Data types that may be common to multiple APIs (offered by the same or different NFs) should be specified in a new separate TS (similar approach as for TS 29.230 for Diameter AVPs).

Table 6.2.6.1-1 specifies the data types defined for the Nnrf service based interface protocol.

Table 6.2.6.1-1: Nnrf_NFDiscovery specific Data Types

Data type	Section defined	Description
SearchResult	6.2.6.2.2	
NFProfile	6.2.6.2.3	
NFService	6.2.6.2.4	

Table 6.2.6.1-2 specifies data types re-used by the Nnrf service based interface protocol from other specifications, including a reference to their respective specifications and when needed, a short description of their use within the Nnrf service based interface.

Table 6.2.6.1-2: Nnrf_NFDiscovery re-used Data Types

6.2.6.2 Structured data types

6.2.6.2.1 Introduction

This subclause defines the structures to be used in resource representations.

Allowed structures are: array, object.

6.2.6.2.2 Type: SearchResult

Table 6.2.6.2.2-1: Definition of type SearchResult

Attribute name	Data type	P	Cardinality	Description
validityPeriod	integer	M	1	It shall contain the time in seconds during which the discovery result is considered valid and can be cached by the NF Service Consumer. This value shall be the same as the value contained in the "max-age" parameter of the "Cache-Control" header field sent in the HTTP response.
nfInstances	array(NFProfile)	0	0..N	If present, it shall contain an array of NF Instance profiles, matching the search criteria indicated by the query parameters of the discovery request.

6.2.6.2.3 Type: NFProfile

Table 6.2.6.2.3-1: Definition of type NFProfile

Attribute name	Data type	P	Cardinality	Description
nfInstanceId	NfInstanceId	M	1	Unique identity of the NF Instance.
nfType	NFType	M	1	Type of Network Function
plmn	PlmnId	O	0..1	PLMN of the Network Function
sNssais	array(Snssai)	O	0..N	NSSAIs of the Network Function
nsiList	array(string)	O	0..N	List of NSIs of the Network Function
fqdn	Fqdn	C	0..1	FQDN of the Network Function (NOTE 1, NOTE 3)
ipv4Addresses	array(Ipv4Addr)	C	0..N	IPv4 address(es) of the Network Function (NOTE 1)
ipv6Addresses	array(Ipv6Addr)	C	0..N	IPv6 address(es) of the Network Function (NOTE 1)
ipv6Prefixes	array(Ipv6Prefix)	C	0..N	IPv6 prefix of the Network Function (NOTE 1)
capacity	integer	O	0..1	Static capacity information, expressed as a weight relative to other NF instances of the same type; if capacity is also present in the nfServiceList parameters, those will have precedence over this value. (See NOTE 2)
load	integer	O	0..1	Latest known load information of the NF ranged from 0 to 100 in percentage (See NOTE 4)
locality	string	O	0..1	Operator defined information about the location of the NF instance (e.g. geographic location, data center)
priority	integer	O	0..1	Priority (relative to other NFs of the same type), to be used for NF/Service selection; lower values indicate a higher priority. If priority is also present in the nfServiceList parameters, those will have precedence over this value. (See NOTE 2)
udrInfo	UdrInfo	O	0..1	Specific data for the UDR (ranges of SUPI, ...)
udmInfo	UdmInfo	O	0..1	Specific data for the UDM
ausfInfo	AusfInfo	O	0..1	Specific data for the AUSF
amfInfo	AmfInfo	O	0..1	Specific data for the AMF (AMF Set ID, ...)
smfInfo	smfInfo	O	0..1	Specific data for the SMF (DNN's, ...)
upfInfo	UpfInfo	O	0..1	Specific data for the UPF (S-NSSAI, DNN, SMF serving area, ...)
pcfInfo	PcfInfo	O	0..1	Specific data for the PCF
bsfInfo	BsfInfo	O	0..1	Specific data for the BSF
nfServices	array(NFService)	O	0..N	List of NF Service Instances
NOTE 1: At least one of the addressing parameters (fqdn, ipv4address, ipv6address and ipv6Prefix) shall be included in the NF Profile.				
NOTE 2: The capacity and priority parameters, if present, are used for NF selection and load balancing. NFs with a lower priority value shall be selected before NFs with a higher priority value; for NFs with equal priority value, the selection shall consider the relative capacity (weight) value of the NFs.				
NOTE 3: If the requester-plmn in the query parameter is different from the PLMN of the discovered NF, then the fqdn attribute value shall contain the interPlmnFqdn value registered by the NF during NF registration (see subclause 6.1.6.2.2).				
NOTE 4: The usage of the load parameter by the NF service consumer is implementation specific, e.g. be used for NF selection and load balancing, together with other parameters.				

6.2.6.2.4 Type: NFService

Table 6.2.6.2.4-1: Definition of type NFService

Attribute name	Data type	P	Cardinality	Description
serviceInstanceID	string	M	1	Unique ID of the service instance within a given NF Instance
serviceName	string	M	1	Name of the service instance (e.g. "udm-sdm")
version	array(NFServiceVersion)	M	1..N	The API versions supported by the NF Service and if available, the corresponding retirement date of the NF Service.
schema	string	M	1	Protocol schema (e.g. "http", "https")
fqdn	string	O	0..1	FQDN of the NF where the service is hosted (see NOTE 1, NOTE 3)
ipEndpoints	array(IpEndPoint)	O	0..N	IP address(es) and port information of the Network Function (including IPv4 and/or IPv6 address) where the service is listening for incoming service requests (see NOTE 1)
apiPrefix	string	O	0..1	Optional path segment(s) used to construct the {apiRoot} variable of the different API URIs, as described in 3GPP TS 29.501 [3], subclause 4.4.1 (optional deployment-specific string that starts with a "/" character)
defaultNotificationSubscriptions	array(DefaultNotificationSubscription)	O	0..N	Notification endpoints for different notification types.
capacity	integer	O	0..1	Static capacity information, expressed as a weight relative to other services of the same type. (See NOTE 2)
load	integer	O	0..1	Latest known load information of the NF Service, ranged from 0 to 100 in percentage. (See NOTE 4)
priority	integer	O	0..1	Priority (relative to other services of the same type), to be used for NF/Service selection; lower values indicate a higher priority. (See NOTE 2)
supportedFeatures	SupportedFeatures	O	0..1	Supported Features of the NF Service instance
NOTE 1: If both the fqdn and ipEndpoint attributes are not present, the FQDN and IP address related attributes from the NF Profile shall be used to construct the API URIs of this service.				
NOTE 2: The capacity and priority parameters, if present, are used for service selection and load balancing. NF Service Instances with a lower priority value shall be selected before NF Service Instances with a higher priority value; for NF Service Instances with equal priority value, the selection shall consider the relative capacity (weight) value of the NF Service Instances.				
NOTE 3: If the requester-plmn in the query parameter is different from the PLMN of the discovered NF Service, then the fqdn attribute value, if included shall contain the interPlmnFqdn value registered by the NF Service during NF registration (see subclause 6.1.6.2.3).				
NOTE 4: The usage of the load parameter by the NF service consumer is implementation specific, e.g. be used for NF service selection and load balancing, together with other parameters.				

6.2.6.3 Simple data types and enumerations

This subclause will define simple data types and enumerations that can be referenced from data structures defined in the previous subclauses.

6.2.6.3.1 Introduction

This subclause defines simple data types and enumerations that can be referenced from data structures defined in the previous subclauses.

6.2.6.3.2 Simple data types

The simple data types defined in table 6.2.6.3.2-1 shall be supported.

Table 6.2.6.3.2-1: Simple data types

Type Name	Type Definition	Description
	<one simple data type, e.g. boolean, integer, null, number, string>	

6.2.6.3.3 Enumeration: <EnumType1>

The enumeration <EnumType1> represents <something>. It shall comply with the provisions defined in table 6.1.5.3.3-1.

Table 6.2.6.3.3-1: Enumeration <EnumType1>

Enumeration value	Description

6.2.6.3.4 Enumeration: <EnumType2>

And so on if there are more enumerations to define.

6.2.7 Error Handling

This subclause will include a reference to the general error handling principles specified in TS 29.501, and further specify any general error handling aspect specific to the API, if any Error handling specific to each method (and resource) is specified in subclauses 6.2.3. and 6.2.4.

6.2.8 Security

As indicated in 3GPP TS 33.501 [15], the access to the Nnrf_NFDiscovery API shall be authorized by means of the OAuth2 protocol (see IETF RFC 6749 [16]), using the "Client Credentials" authorization grant, where the NRF plays the role of the authorization server.

An NF Service Consumer, prior to consuming services offered by the Nnrf_NFDiscovery API, shall obtain a "token" from the authorization server, by invoking the Access Token Request service, as described in subclause 5.4.2.2.

NOTE: When multiple NRFs are deployed in a network, the NRF used as authorization server is the same NRF where the Nnrf_NFDiscovery service is invoked by the NF Service Consumer.

The Nnrf_NFDiscovery API does not define any scopes for OAuth2 authorization.

Annex A (normative): OpenAPI specification

A.1 General

This Annex specifies the formal definition of the Nnrf Service API(s). It consists of OpenAPI 3.0.0 specifications, in YAML format.

A.2 Nnrf_NFManagement API

```
